The EMDR kit is a compact set of technical devices to provide the client with distracting stimuli.

The EMDR kit consists of a remote control to operate the following parts that can be connected to it:

- Light tube for visual stimulation.
- Pulsators for tactile stimulation.
- Headphone for auditory stimulation.

Remote control

This remote control is used to easily adjust and set the various functions which can be read off from the display. It comes with a rechargeable battery.

Light tube

Visual stimulation/eye movements using the light tube:

- Easy to use tripod.
- 70cm wide.
- Various adjustable colours.
- Adjustable speed.
- Adjustable intensity.

Tactile pulsators

Tactile stimulation by means of the vibrating pulsators:

- Adjustable speed.
- Adjustable intensity.

Headphone

Stimulation by means of clicks:

- (Ir)regular clicks.
- Adding your own sounds.
- Adjustable speed.
- Adjustable volume.
- Headphone.

The main advantages over existing devices:

- This 'light tube' is a beautifully styled aluminum tube, be placed on a table- or floor tripod.
- The EMDR kit is handy and all functions are intergrated.
- Easy to operate.
- Additional capabilities include adding sounds.
- The remote control, light tube and puslators come with a two year's guarantee. The tripod, wires, headphone and adapter are guaranteed for six months.

The price of EMDR kit consisting of remote control with adapter, light tube with table tripod, pulsators and headphone amounts to € 475,- VAT Included.
